

## **Rural people learned from what they have seen and experimented.**

2 to 3 decades ago, people began changing or converting their housing technology from wood to concrete in order to find resistance/resilience to hurricane and storm.

Few days after the earthquake, in area like Fondwa (section communal of Léogane), observation shows people begin building with wood, which is giving more pressure on trees.

## **Questions involved**

What are the impacts of the earthquake on forest assets or goods?

What is the rural approach about housing after January 12<sup>th</sup> 2010?

Rural participation in Haiti reconstruction

## **Acute and severe deforestation problem!!!!**

What is the sociology of reforestation in rural community in Haiti?

How does reforestation can contribute to the reconstruction of the Haiti post January 12 , 2010?
